

CMMS SOFTWARE FOR ENERGY SECTOR PLAYERS

DIMO Maint uses digital technology to improve the performance of your maintenance management

Maintaining energy production, storage and distribution services in operational condition and their use by consumers is strategic for the smooth running of the economy in general.

Accelerated by the law on the energy transition for green growth, the digitalization of the maintenance function has become essential for companies in the Energy sector.

Perform

Increase the availability and reliability of your equipment by rigorously monitoring your maintenance plan and anticipating breakdowns.

Secure

Control risks, ensure your regulatory compliance (ATEX, management of important equipment, ...)

Protect

Preserve human health, the environment and promote the energy transition.

Innovate

Enter the era of line maintenance and drive your maintenance management. Simplify the daily life of your on-road technicians!

**“**

A CMMS project is successful if users are well trained and provide comprehensive and systematic information to the database. It is their tool that is an interface between the field and the administrative site. A true memory of maintenance, the CMMS solution will make it possible to analyze the degree of relevance of the request and the efficiency of the technical team.

Bruno Pierrine, Technical Director at Dyneff, distributor of petroleum products.

DIMO Maint, the CMMS adapted to the needs of the Energy sector

The DIMO Maint CMMS provides solutions adapted to the constraints of companies operating in the Energy sector:

- **Equipment management and interventions**

In real time, which equipment requires curative maintenance? You can distribute the service to the technician of your choice.

- **Management of the preventive maintenance plan**

You know in advance on which equipment to intervene in order to check its condition.

- **Management of a conditional preventive maintenance plan**

Thanks to meter readings, measurements, you can measure the proper functioning of a piece of equipment and automatically trigger a preventive intervention at the slightest alert.

- **Taking mobility into account**

Our mobile CMMS application allows access from the field, to all equipment data, operating ranges, etc.

- **Management of subcontractors**

You can manage your subcontracts and grant temporary or permanent access to your CMMS. Subcontractors only have access to maintenance data essential to their intervention. Their connection is completely secure.

- **Key indicators to ensure management**

You follow the maintenance activity in real time via the key indicators, in order to assess the strengths and the areas of improvement.
